EXPERIENCE

Data Scientist

📍 Network International 📅 Sept 2024 – Present

- Acted as the **go-to analytics partner** for cross-functional stakeholders, building an end-to-end **scheme non-compliance fee pipeline** from messy weekly reports into a **self-serve, org-wide dashboard** — partnering directly with merchants to eliminate avoidable fees and deliver **\$500K in annual savings** with a **40% month-over-month cost reduction**.
- Designed **data models** and a **next-best-action recommendation engine** for issuers on **Databricks** and **MLflow**, combining predictive models with rule-based heuristics to surface targeted, actionable insights for cardholder teams and flag at-risk accounts.

Data Scientist Co-op

📍 Babylist 📅 Sept 2023 – Dec 2023

- Built **self-serve dashboards** and **data models** in **Sigma**, integrating **SHAP-based monitoring** on **Amazon SageMaker** and surfacing feature drift via **dbt** models — cutting model debugging time by **~30%** and giving stakeholders direct visibility into model performance.
- Partnered with Product and merchandising teams on a coast-to-coast consumer affinity analysis, identifying brand and category trends that directly informed Q4 merchandising strategy.
- Boosted outbound shipment cost model accuracy by engineering new features, reducing prediction error by **~15%**.

Data Engineer Co-op

📍 Babylist 📅 May 2023 – Sept 2023

- Built and maintained **dbt data models** and **ELT pipelines** feeding Snowflake, overhauling the **dbt pre-commit** validation pipeline to reduce developer commit time **10×** (300s → 30s).
- Migrated ELT pipelines from Astronomer's native Kubernetes clusters to **AWS EKS**, cutting **\$500/month** in infrastructure costs.
- Improved **data governance and auditability** by leading a **Permifrost → Terraform** migration for all Snowflake RBAC, eliminating manual permission management.
- Automated AppsFlyer **data integration** into **Snowflake** via a production **Airflow DAG**, enabling daily attribution reporting for the growth team.

Data Engineer Co-op

📍 RideCo – Transit Labs 📅 Sept 2022 – Dec 2022

- Redesigned a **per-client reporting pipeline** to accelerate NTD report generation **4×** (20s → 5s), saving **~3 hours/month** of analyst time and powering live operational reports used daily by business analysts.
- Built scalable **PostgreSQL** data pipelines supporting day-to-day business reporting needs.
- Improved location data precision by developing walking-distance models with sub-meter accuracy, enhancing granularity of ridership reporting.

Database Developer & Researcher Co-op

📍 SAP 📅 Jan 2022 – April 2022

- Prototyped a **SAP HANA** query rewrite engine that automatically leverages existing materialized views, reducing query execution time by **~40%** on targeted workloads.

Technical Project Manager

📍 WAT.ai 📅 Sept 2022 – April 2023

- Delivered deep learning benchmarks comparing Python and Julia frameworks; implemented **MLP** (MNIST) and **ResNet-18** (CIFAR-10, **91% accuracy**) in Flux.jl.

EDUCATION

B.Math, Data Science Major & Economics Minor

📍 University of Waterloo · 2019 – 2024

- GPA: **88.40%** | Dean's Honours List

SKILLS

PROGRAMMING

Python, R, Julia, C/C++, Bash, SQL

DATA & CLOUD STACK

Warehousing: Snowflake, PostgreSQL

Transformation: dbt Orchestration: Airflow, Astronomer

Cloud: AWS, S3, Terraform, Azure

Distributed: PySpark

BI & ANALYTICS

Dashboarding: Power BI, Sigma, Tableau

ML Frameworks: PyTorch, TensorFlow, scikit-learn

Other: BeautifulSoup, Selenium

PROJECTS

RAG for Workout Selection

- End-to-end RAG pipeline ingesting YouTube workout data; retrieves personalised sessions by mood using vector similarity search.

Overleaf MCP Integration

- Built an **MCP server** enabling Claude to read, write, and compile **Overleaf** LaTeX projects programmatically via natural language.

NLP Disaster Tweet Classifier

- Fine-tuned **DistilBERT** on 10K tweets; achieved **F1: 0.82** after custom preprocessing and Hugging Face optimization — try it live ↗

Fashion Category Classifier

- Multi-modal model (text + image + categorical) classifying **27 fashion categories** at **88% accuracy** in a Kaggle competition.

Housing Prices in R

- Benchmarked **Random Forest** vs **GAM**; RF reduced RMSE by **18%** over baseline on Kaggle housing dataset.

LEADERSHIP & TEACHING

Calculus I & II Tutor

📅 Jan – April 2024

📍 University of Waterloo

Linear Algebra II Tutor

📅 May – Aug 2022

📍 University of Waterloo

VP of Events, Data Science Club

📅 Jan – Aug 2022

📍 University of Waterloo

- Founded *E-leet Coding* — a weekly interview prep series attended by **20 students/session**.
